(54) Title: A FLAT BOARD TYPE BRUSHLESS DC MOTOR

(57) **Abstract:** This invention is related to the flat type motor. The stator core has the laminated flat core structure of a ring type which is slotted a constant distance slot for the install of the teeth core and the winding of the exciting coil on the inner or outer circumference of a stator core circle. The teeth core has a constant thickness which is consisted of a number of teeth core. The rotor against the above stator is consisted of the rotor shaft and the circle flat rotor frame fixed on the motor shaft and is assembled the N- and S- permanent magnet of the even pole number on the circle flat rotor for the flat type brushless and synchronous motor.
